

**2016 American Nurses  
Association Annual Conference**

Connecting **Quality, Safety**  
and **Staffing** to Improve Outcomes

# Value-based metrics to measure nurse staffing and assignment

Presented By

John Welton PhD, RN, FAAN Professor and Senior Scientist, Health System Research, University of Colorado College of Nursing  
Ellen Harper DNP, RN-BC, MBA, FAAN Vice President, Chief Nursing Officer Cerner Corporation

**MARCH 9-11, 2016** LAKE BUENA VISTA, FL [www.nursingworld.org/ANAcConference](http://www.nursingworld.org/ANAcConference)

## Disclosure

**Ellen Harper**  
**DNP, RN-BC, MBA, FAAN**  
Cerner Corporation

**John Welton**  
**PhD, RN, FAAN**  
University of Colorado College of Nursing

Presenters have no relationship with a commercial interest, product or service related to the content of this educational activity and therefore have nothing to disclose

## Objectives

**Staffing & Assignment**  
**Quality** Effectiveness  
& **Safety**  
PERFORMANCE  
**Productivity Nursing Finance**  
Efficiency outcomes

## Attendees will be able to:

- Describe data driven approaches to measure nurse staffing and assignment value
- Learn new patient level nurse costing models
- Understand analytic techniques to measure nursing value

# Nursing Knowledge: Big Data Conference

## A National Problem:

- Drowning in data, starving for information & knowledge
- Lack of patient centric data & cost models
- Need to leverage existing data for secondary purposes
- Measuring care across different settings
- Call for sharable – comparable data

## Big Data Expert Panels:

- National experts ~ 100+ participants
- Multiple expert work groups
- Wide variety of talents, informatics, leadership, academics, clinical practice
- Focus: answering some “big” questions in nursing

# Nursing Value Expert Workgroup

Group members	14
Conference calls	14
Total conference hours	21
Hours of participation	14
% of participation per call	55.1%
Guest participants	7

## Measuring Nursing Value:

Develop a national consensus model to measure patient level nursing intensity and costs per patient in multiple care settings to support the continuum of care and to produce objective measures of nursing value

# The Concept of Value

## *Value of Nursing Care*

Business Model

$$\text{Value} = \frac{\text{Quality} \img alt="Quality icon: a ribbon with the number 1" data-bbox="745 345 780 415}}{\text{Price} \img alt="Price icon: a dollar sign in a circle" data-bbox="735 435 765 485}}$$

Healthcare Model

$$\text{Value} = \frac{\text{Outcomes} \img alt="Outcomes icon: a bar chart with an upward arrow" data-bbox="755 650 790 705}}{\text{Price} \img alt="Price icon: a dollar sign in a circle" data-bbox="735 735 765 785}}$$

## Expert workgroup consensus

### Key items

- Nurses are individual providers of care
- Nursing measured at nurse-patient encounter
- Data collected at all encounters
- Measure all nursing “touchpoints”
- Patient level nursing costs/intensity
- Develop nursing business intelligence/analytics
- Vendor agnostic data model

## What does this do?

### Staffing:

- Change from staffing -> assignment
- Identify best nursing care AND best nurse
- Identify direct care hours/costs per patient
- Comparison and benchmarking

### Quality & Safety:

- Real-time performance/quality metrics
- Predictive analytics
- Business intelligence
- Creates learning system environment

# Rethinking nursing/healthcare systems

## Operational

- Real-time operational decision making
- Higher quality = acting on poor quality before it occurs
- Better cost monitoring = higher efficiency and effectiveness
- Performance metrics at individual nurse-patient encounter

## Clinical

- Real-time clinical decision making
- Automated pattern recognition (data driven expertise)
- Mapping trajectories of care
- Acuity trending (patient, unit, hospital/agency)

## Business intelligence and analytics

### Finance perspective

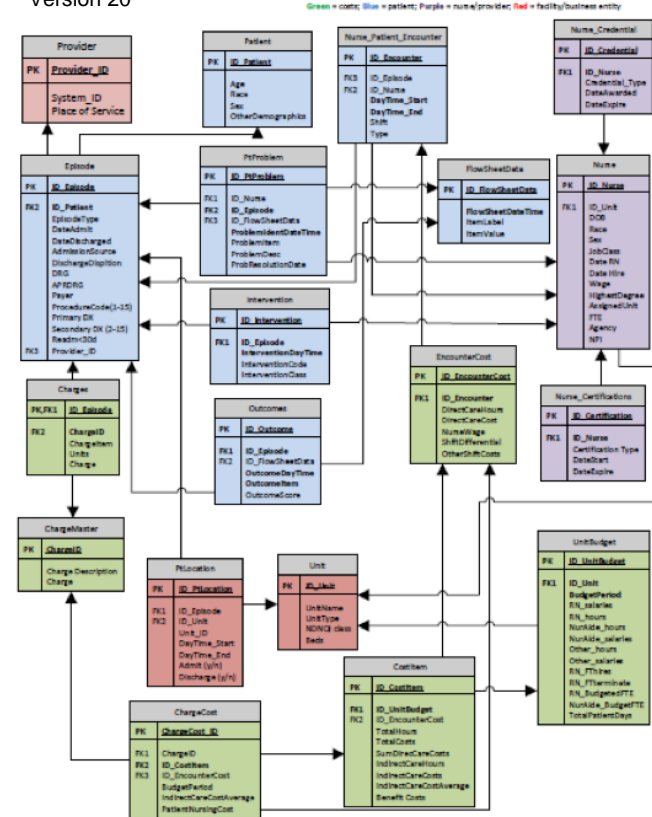

- Patient level costing and billing models
- Optimizing care vs costs
- Matching right provider (nurse)
- Managing volatility, trends
- Skill mix, experience mix
- Value based purchasing

# Nursing value data model

- Organized by:
  - Facility costing, budget, wage
  - Patient, assessment, problem, outcome
  - Nurse/provider, certification, job class, hire date
  - Facility/business, unit
- Incorporates unique RN identifier
- Electronic health record agnostic
- Setting neutral

Nursing Value Data Model  
 Version 20

## Future directions

- Real-time information systems
- Compare across settings of care
- Follow patient/person across encounters
- Link all providers to patient, family, community
- Performance-based analysis
- Value-driven health care
- Nursing costs and characteristics easily analyzed to person/population level outcomes
